Safety: Good; Confusion: Bad

When buying or installing electrical gear, confusion can be dangerous. Unfortunately, many “solar electric” systems are poorly installed, using incompatible products from confusing catalogs or websites.

Can-Do™ Switchgear: High safety with low confusion.

All Can-Do components are either listed or recognized by Underwriters Laboratory.

Versatile

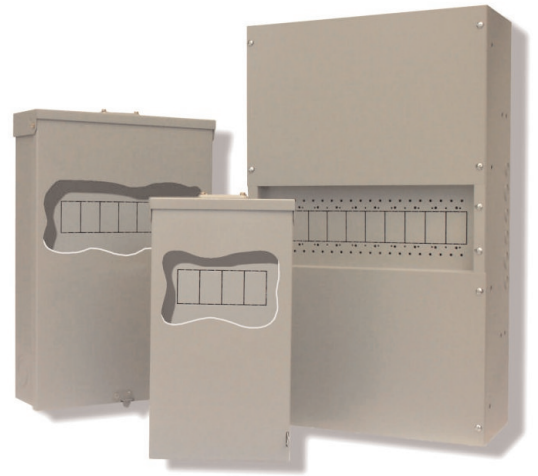

The system is based on three simple enclosures (or “cans”). By varying the interior components, many functions are possible. **Can-Do Switchgear** handles electrical control in ways the others can't match.

Cost Effective

You don't have to give up good system design to get good value. Even for small projects, it's important to leave room in the budget for quality safety and control components, **“Done Right, in UL Listed Enclosures.”**

Industry Standard

Can-Do circuit breakers are already in common use within the alternate energy industry. Replacement parts are easy to find if needed.

Tailored to Fit Your Needs

With many suppliers, you buy off the rack and hope for the best. With **Can-Do Switchgear**, you get a custom fit at a competitive price.

For example: If you need 175/250 amp DC breakers **in a rainproof box**, ask about the **MegaBox™ 3R**—just one of the additional enclosures available on request. Special order items will sometimes fit better or cost less for your particular application, so...

Be sure to discuss any power project with your authorized **Can-Do Dealer**.

All published prices are “Reference Retail” only. Installation and setup not included.
Actual purchase prices are individually negotiated between end users and their retail dealer.
Please respect this manufacturer: Do not reverse engineer or otherwise copy these products.

MegaBox™ Electrical Enclosure

The **MegaBox** is a “NEMA 1” enclosure for dry locations. It features quality American made construction. Listed to the UL 50 safety standard, the **MegaBox** is ready for installation of AC or DC circuit breakers up to 250 amps*, shunts, etc. Available breakers include QOU and Outback types.

Spacious Interior

Why struggle with heavy cables in undersized, overcrowded “DC Disconnect” boxes? The **MegaBox** is 30” x 18” x 8” (four times bigger than Brand X), but it's *still* priced to beat the “knuckle busters”! Roomy enclosures are easier to work in, and they allow more flexibility for future system enhancements.

\$229 Plus Options

Installer Friendly

The **MegaBox** doesn't need much drilling. Bottom knockouts are 2” nominal—ideal for battery cables. The top knockouts match popular PV controllers. Side wall “pilot holes” perfectly fit common shunts and terminal blocks. The pilots also position hole punches to match Xantrex or Outback inverters. Additional knockouts are ideal for Victron™ inverters.

Highly Adaptable

Within limits, the following options will fit the **MegaBox**:
A, B, D, E, G, I, K, L, M, P, Q, S, T, V, X, Y.
Refer to the **Options** pages for more information.
