## Smart and strong, but friendly, too...

Most “smart” inverter/chargers are not very friendly. Full service dealers know they’ll be called on to explain and re-explain such equipment to their customers. If the apparatus ever gets a new owner (or a house sitter), the customer education process must start all over. Victron Energy™ offers you a simpler way to get smart power.

### User Friendly

The “search” is over: Victron modular inverters eliminate the need for “search mode” and all the confusion that goes with it. Two inverter circuits are blended within the same box to give you the best of both worlds; all you’ll notice is **sine wave power** when you want it. The “no load power draw” is less than ten watts per inverter.

Efficiency is over 90% through most of the power range.

### Budget Friendly

Conventional system designs force you to overspend on inverters just to get enough battery charging ability. With Victron’s matching stand-alone chargers, you can **Invert Small and Charge Large<sup>SM</sup>**. Don’t buy more inverter wattage than you need. Start with one **Blue Box<sup>TM</sup>** or more, and grow the system to suit your individual needs.

### Generator Friendly

Backup generator AC is usually imperfect; many battery chargers can’t use it, but Victron charge circuits tolerate a wide range of AC input. For any inverter/charger, the owner should adjust the “Maximum Generator Amps” setting fairly often. Victron lets you dial this in with a mechanical “radio knob” option--such simplicity is unmatched by any competitor.

For “village power”, up to 15 inverters can be stacked for 3-phase operation.

### Installer Friendly

Every connection point for every wire is easy to reach and right behind the large front cover. No more straining or squinting. Forget about costly “conduit boxes”, too; **Blue Power<sup>TM</sup>** works great with PVC flex conduit.

For fast, easy setup, use the **free Windows application software** and low cost Computer Adapter.

All published prices are “Reference Retail” only. Installation and setup not included.  
Actual purchase prices are individually negotiated between end users and their retail dealer.

## Rugged and Proven

Oceangoing yachts are an extreme test bed for power components: those who can't perform reliably get left behind. In the top notch shipyards of Europe, Victron Energy™ has set the standard **since 1976**.

- Insist on smart *and user friendly* design.
- Remember the importance of battery recharge.
- Focus on reliable power: “tools”, not “toys”.

## Internal Self Protection

**Blue Power™** means cool operation and built-in “meltdown” protection . Every unit monitors the temperature of its own critical components, and “thinks ahead” to maintain safe levels. Since Victron products are built to endure up to 140 degrees F, they can probably survive your application. Internal **DC fuses are also included** with every modular inverter.

**Twin inverter/chargers  
Dual add-on chargers  
MegaBox™ DC Disconnect  
Additional High Spec Components**

## World Standards

Victron inverters follow the UL458 standard; separate chargers follow UL1236. The products also meet strict EU standards for low “radio noise” interference. Victron gear is self certified at present. If your power project will be inspected, always consult with your dealer and local code inspector before installing any alternate energy equipment.

## Product Support

All Victron products come with a two year limited warranty. The mod-ulars are dealer repairable, and minimal downtime is a top priority. Need equipment for “international AC”? Just ask.

## Invert Small; Charge Large<sup>SM</sup>

Inverter/chargers (even **Blue** ones) are always stronger in “battery depletion mode” than they are in “battery charger mode”—**that's the opposite of what batteries really need.** Many systems include

too much “depleting capacity” just to get adequate recharge. Instead of ratcheting up the cost of your system with extraneous inverter wattage, you can install complementary Victron inverters and chargers for a much lower price.

Introduce your battery to a new friend. **Choose Victron.**
